

Potential for Inundation from Tsunami

- 10m zone
- 7.5m zone
- 5m zone
- 2.5m zone
- 0m zone

Shows the potential for inundation on the coast of Palu City and its surroundings, as a result of the Central Sulawesi Tsunami.

The purpose of this map is to identify potential areas in need of assessment based on modelled data of impacts, and for comparison of situation found on the ground and modelled data.

- District Boundary
- Subdistrict Boundary
- Administrative Village Boundary

Total Population

- 71 - 1,000
- 1,001 - 5,000
- 5,001 - 10,000
- 10,001 - 15,000
- 15,001 - 22,653

Population data not available

Potentially Exposed to Liquefaction

Liquefaction hazard based on USGS preferred model.

Data Sources: BMKG, USGS, BPS, AHA
