

The map shows the INDICATIVE extent of wildfires, derived from Copernicus EMSR726 and Sentinel-2 satellite images. Due to cloud cover on the used satellite images, the map DOES NOT show the full extent of wildfires. The map should only be used as an indicator of where wildfires are likely to have happened. The indicative extent of burnt areas is mosaiced from images from 13 May to 11 June. **Map last updated on 14/06/2024.**

** Building location derived from the Belize Wildfires Response by the Humanitarian OpenStreetMap Team and the Open Building project by Google (80% confidence score), downloaded 13/06/2024.

Data Source
Burnt areas: Copernicus Emergency Management Service, Sentinel-2 imagery, Buildings: Humanitarian OpenStreetMap Team, Google, Settlements: Statistical Institute of Belize. Other data: NEMO, OpenStreetMap, GeoDar, OurAirports, World Port Index
